CIRCUIT DIAGRAM:

OUTPUT:

Wokwi Simulation:

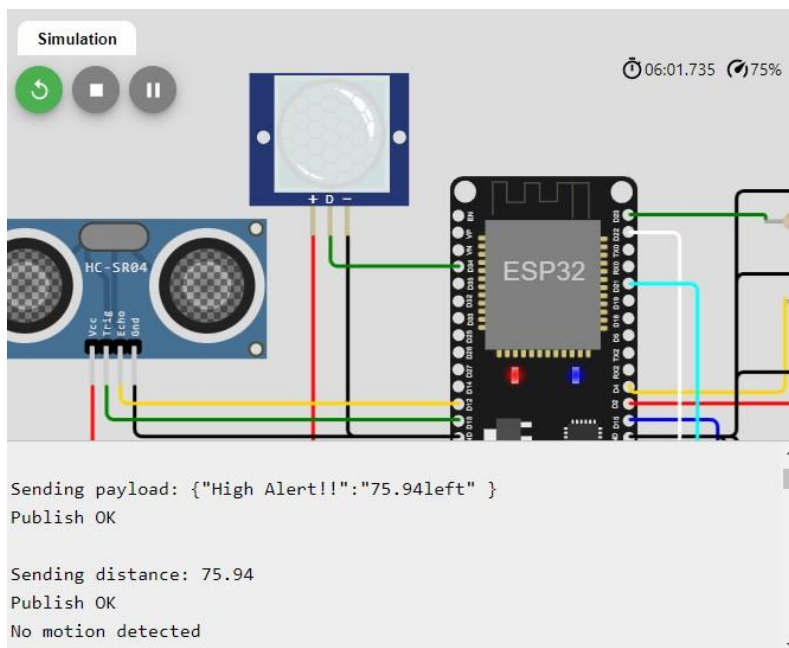

The Wokwi simulation interface displays a sketch and a circuit diagram. The sketch is as follows:

```
106 float cm = readcmCM();
107 if(digitalRead(34)) //PIR motion detection
108 {
109   Serial.println("Motion Detected");
110   Serial.println("Lid Opened");
111   digitalWrite(15, HIGH);
112 }
113 else
114 {
115   digitalWrite(15, LOW);
116 }
117 if(digitalRead(34) == true)
118 {
119   if(cm <= 100) //Bin level detection
120   {
121     digitalWrite(2, HIGH);
122     Serial.println("High Alert!!!,Trash bin is about to be full");
123     Serial.println("Lid Closed");
124     lcd.print("Full! Don't use");
125     delay(2000);
126     lcd.clear();
127     digitalWrite(4, LOW);
128     digitalWrite(23, LOW);
129   }
130   else if(cm > 150 && cm < 250)
131   {
132     digitalWrite(4, HIGH);
133     Serial.println("Warning!!,Trash is about to cross 50% of bin level");
```

The circuit diagram shows an ESP32 microcontroller connected to an HC-SR04 ultrasonic sensor, a PIR motion detector, and an LCD display. The simulation is running, and the output shows the following messages:

```
Connecting to Wifi..Wifi connected, IP address: 10.10.0.2
Reconnecting MQTT client to
j5bxb7.messaging.internetofthings.ibmcloud.com
IBM subscribe to cmd OK
```

When No Motion Is Detected:

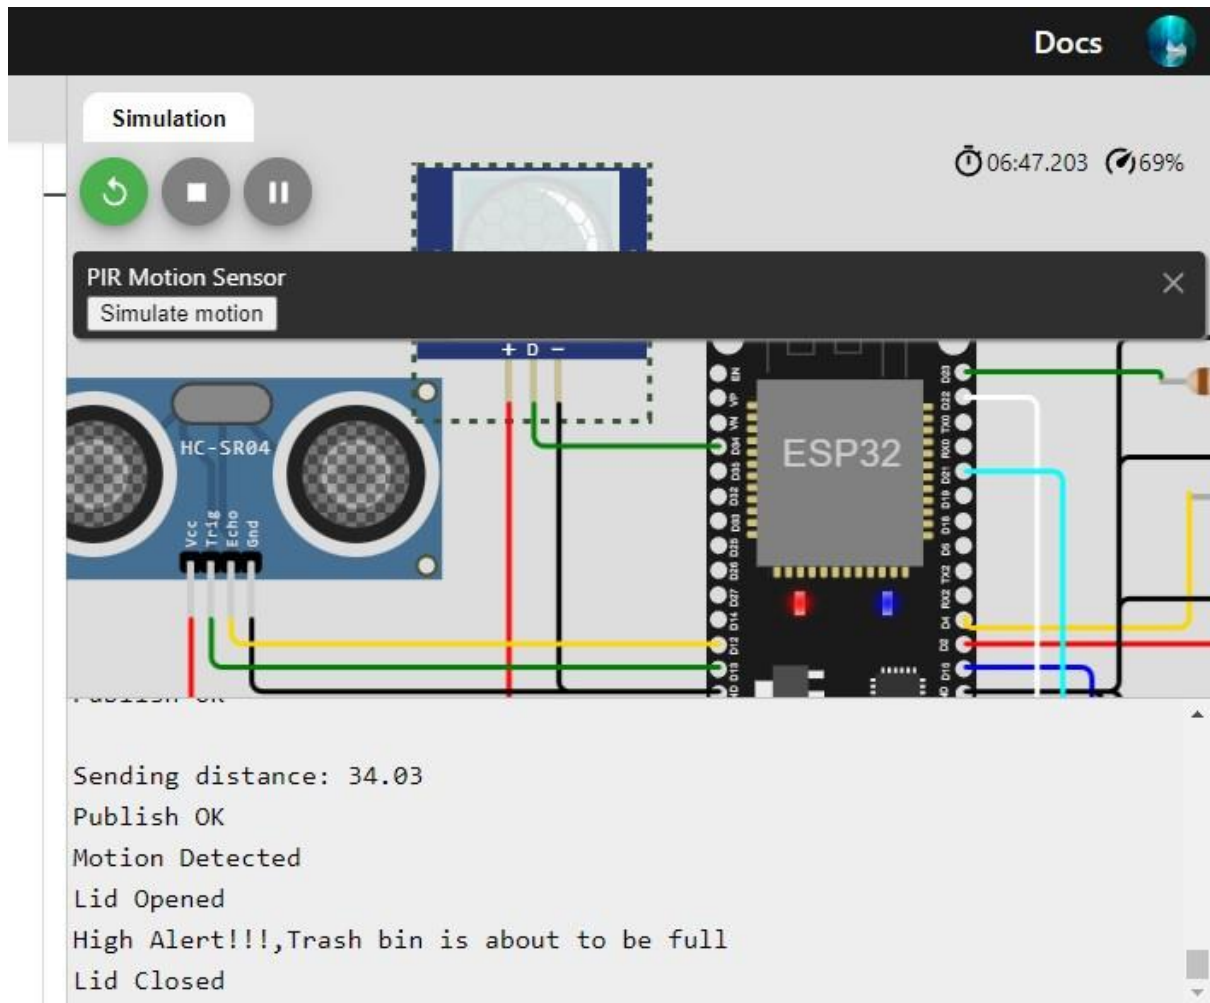

The Wokwi simulation interface shows a circuit diagram with an ESP32 microcontroller, an HC-SR04 ultrasonic sensor, a PIR motion detector, and an LCD display. The simulation is running, and the output shows the following messages:

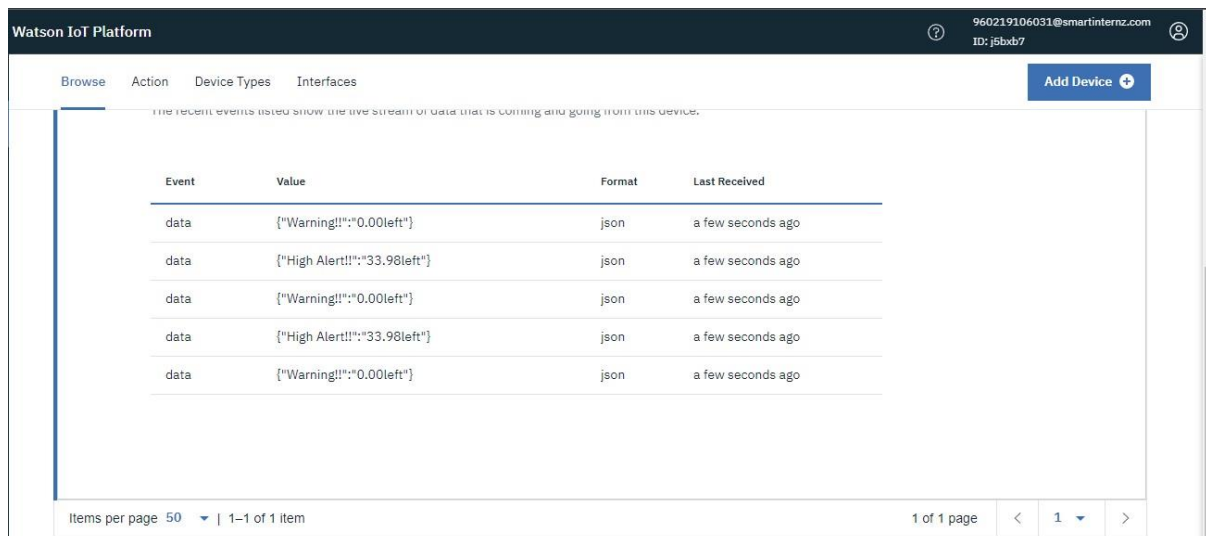

```
Sending payload: {"High Alert!!":"75.94left" }
Publish OK

Sending distance: 75.94
Publish OK
No motion detected
```

When Motion Is Detected:
