ASSIGNMENT-2

```python
import random
l=[]
n=int(input("Enter the no of inputs: "))
for i in range(0,n):
    a=int(input())
    l.append(a)
print(l)
temperature=random.choice(l)
humidity=random.choice(l)
print(temperature,humidity)
if temperature>100:
    if humidity>80:
        print("DANGER LEVEL IS HIGH")
    else:
        print("HIGH TEMPERATURE")
elif temperature==100:
    print("Care needed !! no risk")
else:
    print("Everything is Perfect")
```
